Cabbage Segmenter

SERIES # 7200

Function: To cut Cabbage into segments.
Product: Whole Cabbage heads.
Capacity: 1 Cabbage at a time, up to 6-8 per minute.
Requirements: 6 Bar of continuous clean air supply
 and 240V single phase 10amp electrical point

Consisting of:

Utilising highest quality components this machine is designed and manufactured in Australia to cut cabbage heads into segments quickly, safely and economically.

The operator positions a cabbage on the cutting grid and pushes the start button which will activate the sliding safety door/s down which have safety interlocks fitted. When doors are closed the pneumatic cylinder will push the cabbage down through the knife grid. The cut segments will then fall through onto the discharge elevator up and onto the next process.

The Segmenter is a self-supporting smooth, quiet running design constructed from stainless steel and food grade plastic components with a glass beaded finish.

The easy to remove cutting grid as shown in the below photo is available in 2, 4 or 6 segments.

Controls:

The Segmenter has its own stand-alone controls, the discharge belt speed is controlled by a frequency inverter via a potentiometer dial, it has a stop/start & reset buttons, it comes complete with a 240V single phase plug and 5 metre lead.

- Cabbage coring, dicing, shredding, washing etc. is available please just ask for more information
