# Cabbage Corer

## SERIES # 7300

---

**Function:** *To de core Cabbage.*  
**Product:** *Whole Cabbage heads.*  
**Capacity:** *1 Cabbage at a time, up to 5-6 per minute.*  
**Requirements:** *6 Bar of continuous clean air supply.*

---

**Consisting of:**

Utilising highest quality components this machine is designed and manufactured in Australia to core cabbage heads, safely and economically.

The cabbage is held at its sides with the core facing the machine and then pushed onto the face plate spikes. Depressing the pneumatic foot pedal causes the drill knife to begin to spin. The cabbage is then slowly pushed forward, and the cabbage will be cored by the end of the stroke. There is an adjustable depth gauge to suite shallow or deep coring if required

The Corer is a self-supporting smooth, quite running design constructed from stainless steel and food grade plastic components with a glass beaded finish.

**Controls:**

The Corer has its own stand-alone controls which are air foot operated only, so there is no electrical supply required

- Cabbage segmenting, dicing, shredding, washing etc. is available please just ask for more information
